[TM-50TR TUNER/METRONOME/TONE TRAINER](#)

Analyze your playing to improve your sound & technique

A tuner/metronome that further improves the quality of your practicing

PITCHBLACK ADVANCE PEDAL TUNER

An evolution of the best-selling Pitchblack tuner. The ultimate pedal tuner, meeting the needs of every guitarist.

As the clear standard in pedal tuners for the guitarist or bassist, the Pitchblack is loved by professionals and amateurs around the world. The Pitchblack Advance is the next-generation model, a further evolution that features an advanced cutting-edge form and many of the functions and technologies developed for previous models of the Pitchblack series. Embracing both the traditional and the revolutionary, it represents the perfect summation of pedal tuners.

GRIPTUNE CLIP-ON TUNER

Easy to attach! Accurate and discreet tuning for any guitar. Griptune, the ultra-compact clamp-type tuner.

KORG, tuning innovator and creator of numerous clip-on tuners, introduces the Griptune, a new, clamp-type tuner. With a weight of just 13 grams (0.46 oz) and an ultra-compact size, it can be unobtrusively attached to the headstock of your guitar for casual yet precise tuning.

GA-2 GUITAR/BASS TUNER

Even easier to use with a large note name/string name display.

A dedicated compact tuner for guitar/bass, with a stylish new look.

CANNED TUNER CLIP-ON TUNER

You've never seen canned goods like these! It's the new Canned Tuner from KORG.

Simply open the pull-top lid to find a guitar/bass tuner from KORG, the most trusted name in tuners. This unique fun package is an ideal gift, and once the can is opened it serves as a sturdy storage container to protect your tuner.

Limited Edition

[KORG In-Ear Metronome: Feel the Rhythm!](#)

Four types, many features

KORG offers four new in-ear metronomes with the kind of functionality you've come to expect from this high-end brand. They offer you access to a wide range of tempos and rhythms. What makes these products so special is that each set of in-ear metronome is geared towards a specific type of user. The white [IE-1M](#) In-Ear Metronome is suitable for musicians who play alone. For musicians in an ensemble, there's the black [SY-1M](#) Sync Metronome. You can even synchronise multiple in-ear metronomes via infrared so everyone plays to exactly the same rhythm.

For dancers and athletes!

Not only do musicians profit from the KORG in-ear metronome. As the name implies, the red [SY-1D](#) Sync Dancing is designed specifically for dancers. You can also synchronise this model with your dance partner's set, so neither of you will miss a beat! Finally, there's the silver [SR-1G](#) Stroke Rhythm. This model was developed for golfers to improve their swing, but joggers and walkers can also benefit from these ultra-lightweight in-ear metronomes. Get into a rhythmic trance and before you know it, you'll have run that extra mile!
